

ReleaSol Release Agent

The new high polymer asphalt blends prove troublesome for paving equipment, sticking to truck boxes, rubber tire rollers and more. **ReleaSol-P** was specially formulated to prevent the adhesion of these high polymer asphalts, providing true advancements in economy, user-safety and environmental integrity.

ReleaSol works exceptionally well on polymer modified materials, such as Polymer, SMA, PMA, Smurf, Smack, Modified D-Mixes, Crumb Rubber, Permafex and Fiber. And performs equally well when used with conventional hot mix.

ReleaSol is safe and simple to use and it's unique film-forming ability protects all types of equipment used in road paving and construction. **ReleaSol** is non-streaking and poses no pooling danger to a finished asphalt surface. With its concentrated formula and very low evaporation **ReleaSol** goes further saving both time and money.

PRODUCT APPLICATIONS

- Paving equipment - rollers, spreaders, dumptruck boxes
- Asphalt spraying & mixing equipment
- Specially formulated for use with the new high polymer blends
- Modified D-mixes, Crumb Rubber, SMA, PMA
- Permafex, Fiber, conventional asphalts

HEALTH

- No carcinogens or hidden toxins
- No aspiration hazard
- No phosphates, acids or distillates
- No long term health effects

SAFETY

- Non-flammable, non-corrosive
- No special protective gear required
- Contains no VOCs (Volatile Organic Compounds)
- Safe alternative to hazardous chemicals
- Readily biodegradable
- Not regulated by TDG
- Low aquatic toxicity

ENVIRONMENT

- Readily biodegradable
- Not regulated by TDG
- Low aquatic toxicity
